Overview

According to the VITA65 specification, BKP6-CEN06-11.2.5-n backplane profiles are intended for development environments. Some systems might be able to deploy with these backplanes.

This backplane contains 5 Payload Slots and 1 Switch Slot. Payload Slot Profile for all slots is SLT6-PAY-4F1Q2U2T-10.2.1. Switch Slot profile is SLT6-SWH-16U20F-10.4.2. The Data Plane and Control Plane are both switched.

Dawn's implementation of this profile allows for a choice of RTM connectors or use of FMM* modules. Custom FMMs* loaded with standard COTS connectors, can provide low profile signal breakout for applications where transition module cost and size do not work.

See separate FMM data sheet for specifics.
